2. To improve the effectiveness of spark ignition of lean mixtures a few modifications of SI engines ignition systems have been proposed: 2- spark-plug systems (twin-spark), increase of ignition energy by: increase of spark energy, plasma ignition, laser ignition Increase the distance between electrodes.

Method of ignition Spark Ignition (SI) engines, ignition is by the application of external energy (to spark plug) mixture is uniform (conventional engines), mixture is non-uniform (stratified-charge engines) Compression Ignition (CI) engines, ignition by compression in conventional engine (Diesel engine),

this model match well with the engine test data under various engine speeds, loads, spark ignition timings and air fuel mass ratios. The developed model is used to study cyclic variation and combustion stability at lean (or diluted) combustion conditions. Several variation sources are into the combustion model to simulate engine introduced

IGNITION SYSTEM The ignition system of an internal combustion engine is an important part of the overall engine system. All conventional petrol[[1]] (gasoline)[[2]] engines require an ignition system. By contrast, not all engine types need an ignition system - for example, a diesel engine relies on compression-ignition, that is, the rise in
