Composition and structure. Surfactants are usually organic compounds that are amphiphilic, meaning they contain both hydrophobic groups (their tails) and hydrophilic groups (their heads). Therefore, a surfactant contains both a water-insoluble (or oil-soluble) component and a water-soluble component.

Dispersions in liquids: suspensions, emulsions, and foams

1.1. Definitions. The origin of surfactants dates back to man-made products from plant oils and animal fat such as soap and detergents that have been used for millennia as cleaning, hygiene, and foaming agents. Surfactants often lower the interfacial tension between two or more components in a material system, thereby increasing miscibility, colloidal stability, dispersion, and enabling a ...

In chemistry, a solution is a special type of homogeneous mixture composed of two or more substances. The term aqueous solution is when one of the solvents is water. In such a mixture, a solute is a substance dissolved in another substance, known as a solvent. The mixing process of a solution happens at a scale where the effects of chemical polarity are involved, resulting in interactions that ...
